Improve Texture

MicroNeedling/CIT

Collagen Induction Therapy (CIT) also called Microneedling uses a device to create micro-wounds in the dermis. These micro-injuries trigger the bodies natural healing process, producing new collagen and elastin. The result is improved skin texture & laxity and a reduction in the appearance of wrinkles, stretch marks, and acne scars. These channels also allow Hyaluronic Acid or other serums to be driven deep into the dermis, increasing the skins utilization of nutrients by up to 3000%.

FAQ's

What is MicroNeedling?

Micro needling treatment uses a hand held needle pen to create controlled depth micro-injuries to the skin. This stimulates the skin's natural repair process to produce collagen and elastin.

What is Hyaluronic Acid?

Hyaluronic Acid/HA is a magnet to moisture and has been promoted as a "fountain of youth" serum. HA helps the cells retain water for hydrated, plump and healthy skin.

Who is a good candidate?

Anyone that wants to improve skin irregularities and look younger.

How many treatments do I need?

A single procedure will make a nice change but a series of 3-6 treatments is ideal for optimal results.

How much downtime will I experience?

The majority of patients skin will be red and flushed for 12-24 hours.

When will I see results?

Within 2 weeks you will start to see change that will continue for 3 months.
